Increase Customer Satisfaction & Improve Operations

With the GoTab and PourMyBeer integration, guests can now open a "pour card" to order and pay for their drinks. PourMyBeer technology enables faster, more efficient access to beverages by allowing consumers to pour their own beer, wine, cocktails, and more. All while paying by the ounce. Integrating the PourMyBeer system with GoTab's POS creates an even smoother, simpler, and more efficient experience for operators and guests.

THE GOTAB ADVANTAGE

GoTab empowers consumers with mobile ordering & payment technology that puts them in control of their dining experience. GoTab operators can run lean, profitable hospitality operations with easy-to-use restaurant commerce tools. With mobile ordering, mobile payment, and all-in-one POS, GoTab streamlines hospitality operations for consumers and operators.

HOW IT WORKS

- Servers will open a tab on the POS, pre-authorize the credit card, and select "add pass"

- Servers then tap a "pour card" to assign it to the open tab

- Customers will use the "pour card" and tap it on the PourMyBeer RFID card reader to pour and enjoy a drink

- Once the drink is poured, an item is created and the amount is sent to GoTab where the item is now added in real-time to the open tab

- If the tab is open, PourMyBeer will allow the beer to be poured, if it is closed it notifies the customer to open a tab with GoTab

- When the customer is done, a server can manually close the tab and charge the credit card on file, split payments if multiple "pour cards" are assigned to a tab or leave it as is and GoTab will automatically close the tab
