GoTab Coursing

It's common for guests to want to take control of their experience and pace their meals to their liking. Whether they're placing multiple small plate orders or starting their meal with a dessert, guests deserve the freedom to decide how their meal is served. But when ordering via QR, most POS systems don't offer a way for guests to control the order that their dishes get delivered to the table. GoTab's Coursing addresses this problem.

Streamline kitchen operations and drive guest hospitality
Allows servers to fire courses to the kitchen in automatic intervals and adjust orders not yet fired to the kitchen in real-time.

Efficiently space out courses based on guests' unique preferences
Customers looking to add another plate or two to round out their meal, no longer need to wait too long for the items or have their appetizers come out at the same time as their main entrée.

Save time and ease steps of service for front-of-house staff
Servers can cover more tables more efficiently while guests get to effortlessly take more control of their service.

Easy UI lets guests and servers customize and adjust courses on-the-fly
GoTab's UI optimizes efficiency and ease of use with features like one-tap ordering, tab- and item-splitting.

GoTab Coursing

Keep the Hospitality Flowing – At Your Guests' Pace

Purpose-built for restaurants specializing in high-volume, small plate concepts, GoTab Coursing allows servers to fire courses to the kitchen in automatic intervals and adjust submitted orders that have not yet fired in real-time, optimizing operations in the kitchen and enabling a more enjoyable guest experience.

For Servers …

- Easily customize guest courses to their preference
- Paces guests during their experience
- Orders fire to the kitchen based on the customized times set
- Manually fire items earlier if needed

For Guests …

- Fast, intuitive user experience puts guests in control
- Review and rearrange courses to the desired order
- KDS adjusts firing to the kitchen based on the guests' selections

Avoid Table Crowding

Increase Up-Sells and Average Check Size
